

BCBanking

Direct banking in NAV/BC, real-time integration with a wide selection of banks

Improve your financial efficiency, save time, effort and money. BCBanking provides real-time insight. Let it take care of all the registration and technical connections to banks.

Automatic integration of all bank transactions

BCBanking is an efficient add-on banking solution if you want to improve your financial efficiency and accuracy. It offers you an efficient way of automatically integrating every single transaction of every single bank and bank account into your Business Central or Microsoft Dynamics NAV. It connects you to multiple bank accounts. This goes for all types of accounts like e.g. current, checking, saving, cryptocurrency and e-wallets.

Initiate worldwide payments

The function to initiate worldwide payments via Open Banking and PSD2 channels will be added soon. This will be possible from any account and for any payment type that is provided by the connected banks: one-time, future dated, scheduled and bulk payments.

Security

Bank level security is guaranteed by multiple layers of encryption and tokenization. We adhere to the highest international standards of privacy and security. Our solution is completely Azure based. We do not save any data or banking details. The only thing that we store is the necessary private key, that was specifically designated for one user account and device. The authorization session of any action expires in just a couple of minutes.

BCBanking

Another smart Microsoft Dynamics NAV/BC add-on by idyn

At idyn, we specialize in developing add-ons for Microsoft Dynamics NAV/BC. These add-ons aim at three target groups: developers, partners and users of Microsoft Dynamics NAV/BC. With BCBanking we aim to support companies and organizations in improving their financial processes.

Some of the main features:

- One integration with a wide selection of banks
- Bank level security
- Translated into a clear and easy-to-read format.
- Real-time insight in cash flow
- Flexible synchronization up to every hour
- Worldwide payment Initiation services (Q1, 2020) via open banking and PSD2 channels
- Fully integrated in Business Central or Microsoft Dynamics NAV
- Available from NAV 2013 R2 up to NAV 2018 and Business Central
- No more hassle with files (Sepa etc)
