NAVcommerce

NAV/BC + Magento
100% integrated e-commerce

B2B & B2C e-commerce

NAVcommerce enables you to run your e-commerce directly from out of NAV. It gives you a full featured PIM system so that you can manage item attributes, rich texts, images, categories and everything else that is needed to run an online shop, directly from within NAV.

Launching an online shop usually isn't the problem. But to make sure prices, inventories, orders and invoices are completely in-sync with your ERP is another thing. That is why we developed NAVcommerce. An ERP focused e-commerce solution. This add-on extends your NAV with everything you need to sell online and at the same time it seamlessly integrates all data with one or more Magento store fronts.

NAVcommerce for customers

There is no need to learn new software. Our view is that all your data already sits in NAV. And that is the application your employees know how to work with. So we just extend that application with everything that is missing. After a 5 minute set-up you can start to enrich product data, set up storefronts and categories, publish your products online, provide logins to customers so that they can start to use one or more of your online B2B or B2C stores.

NAVcommerce for partners

NAVcommerce is an easy to install standard solution. The add-on does not touch any existing NAV objects, so there is no merging and no risk involved. There are lots of customization options. Most customer requests can be fulfilled by using the extensive item attribute mechanism. But, for those partners who want to add customizations at a lower level there is an SDK and complete framework to use custom / add-on tables online.

NAVcommerce for Magento developers

NAVcommerce makes that you can say yes to any customer who uses NAV, without the need to know anything about NAV. Simply setup your store(s) any way you like, setup NAVcommerce to connect to the Magento API, and all data will be uploaded and retrieved automatically.

There is no need to setup anything in terms of products, VAT, customers, order processing. NAVcommerce will take care of everything.

idyn.nl

NAVcommerce

Another smart Microsoft Dynamics NAV add-on by idyn

Works with NAV 2015 to 2018

Works with Business Central

Works with Magento 1 & Magento 2

Run both B2C & B2B shops
