Object Manager Advanced

The world leading all-you-need and all-you-always-wanted developing tool

Microsoft Dynamics NAV is exactly what the name says: dynamic. Developers can extend and improve it by creating add–ons, extensions and other customizations. idyn's Object Manager Advanced is by far the most efficient and versatile development tool to do so.

The all-you-need and all-you-always-wanted developing tool. Used by over 70% of all NAV developers

It is safe to say that with Object Manager Advanced, idyn re–invented the NAV development environment. A broad spectrum of features reduce errors, save time and improve the quality of the output. Add–onsmade with Object Manager Advanced easily comply with the Certified for Microsoft Dynamics (CfMD) standards. Object Manager Advanced was awarded by Mibuso (Best Download Award) and by Microsoft with the Microsoft innovation Award.

Develop. Analyze. Improve.

Object Manager Advanced is the tool–of–choiceto support developers and consultants in Microsoft Dynamics Sure Step or any other methodology tool. You can benefit from powerful functionalities such as the ability to lock objects, save objects in a repository like TFS, renumber objects, fields and elements without hassle and the addition of an external project module. If you need to analyse new code, you will discover that OMA is of great help. Easily browse through objects and code. Errors and conflicts are easily found and fixed. The Check Guidelines tool checks if coding standards are met and correct C/ALcode where needed. Whether you want to use the standard Microsoft conventions or your own.

Deploy. And rest assured.

Object Manager Advanced puts an end to endless checking, testing and comparing before deployment. You simply combine all modifications in a transport and use the wizard to import them into your customer database. You can, of course, do everything from within Microsoft Dynamics NAV. So no hassle of switching from system to system.

Object Manager Advanced

Another smart Microsoft Dynamics NAV add-on by idyn

At idyn, we specialize in developing add-ons for Microsoft Dynamics NAV. These add-ons aim at three target groups: developers, partners and users of Microsoft Dynamics NAV. Object Manager Advanced is a developer solution and is extensively used by many of our partners. It helps to make the life of developers easier. As a result, customers are offered better add-ons and upgrades.

Numerous features for advanced development and deployment

Object Manager Advanced has so many features and possibilities, we can't even begin giving you a comprehensive list here. Plus: new functionalities are added on a regular bases. You can find all the details on our website, including video demos. Go to www.idyn.nl.
