

# ConnectIT

Create custom interfaces in no time

Design your own  
import and export  
interfaces, without  
coding, all directly in  
NAV / Business  
Central.

## **Integrate your NAV/BC with the rest of the world**

You probably want to import suppliers catalogues. You may want to integrate your e-commerce and warehouse systems with NAV/BC. Perhaps match your CRM and ERP systems. Import information from your HR and payroll systems. In all cases you need custom interfaces to do just that for you. ConnectIT connects databases and/or companies within databases, web services, other add-ons and applications in the most efficient way.

## **Create interfaces in the blink of an eye**

Traditionally, building an interface can be a time consuming and technically complex task. Not with ConnectIT. This solution elegantly guides you through the process, even if you don't have advanced technical knowledge. This concept saves both time and money. Once your new interface is running, maintenance is just as easy. Just dive back into ConnectIT's flexible and user friendly toolbox.

## **Maximize productivity**

ConnectIT can do a lot more than the examples already mentioned above. You may want to keep track of your cash register information in Excel and then import the details into the Cash Journal of your Microsoft Dynamics NAV/BC. Just create the interface. You may want to get information from and to your mobile services. Again, just create the interface for that. The sum of these easy-to-create interfaces is: all systems and third party applications connected to your Microsoft Dynamics NAV/BC. Although ConnectIT can be used by users without technical knowledge, it also supports advanced use of C/AL code and AL code.

# ConnectIT

### Features that make your life easier

#### Export Management features

- Export many file formats. I.E. XML, JSON, CSV, Fixed Width and Excel
- Synchronize data between different companies in the same NAV/BC database
- Copy export files to import files
- Export ZIP-files and manage them
- Table/record monitoring and automate exports

#### Import Management features

- Import many file formats, including JSON, XML, CSV, Fixed Width and Excel
- Create import files in batch
- Create import files automatically
- Pre & post processing

#### Connector features

- 2 way web service communication
- Support GET, PUT, POST, DELETE
- Multiple authentication types

#### Monitoring data

- Export on changes
- Export on additions
- Export on deletions
- Export on renames

#### Features for Task Management

- Plan imports & exports & export jobs
- Plan tasks & transports
- Plan execution of codeunits
- Automatically run tasks before or after an import or export

#### Features for Projects

- Chain tasks into complete import/export projects
- Connect all relevant imports, exports and tasks to a project, in order to easily reuse them in other environments.

#### Features for Transport

- Download from (S)FTP server
- Upload to (S)FTP server
- File system & network transfers
- Execute .exe files and shell commands
